

1 安装 axios

```
C:\Users\admin\Desktop\14\bookvue>npm install axios --save
npm WARN ajv-keywords@3.5.2 requires a peer of ajv@^6.9.1 but none is installed. You must install
npm WARN optional SKIPPING OPTIONAL DEPENDENCY: fsevents@2.3.2 (node_modules\fsevents):
npm WARN notsup SKIPPING OPTIONAL DEPENDENCY: Unsupported platform for fsevents@2.3.2: wanted {"
npm WARN optional SKIPPING OPTIONAL DEPENDENCY: fsevents@1.2.13 (node_modules\webpack-dev-server
npm WARN notsup SKIPPING OPTIONAL DEPENDENCY: Unsupported platform for fsevents@1.2.13: wanted {
npm WARN optional SKIPPING OPTIONAL DEPENDENCY: fsevents@1.2.13 (node_modules\watchpack-chokidar
npm WARN notsup SKIPPING OPTIONAL DEPENDENCY: Unsupported platform for fsevents@1.2.13: wanted {
```

2 在 main.js 中引入 axios

```
import Vue from 'vue';
import App from './App';
// import router from './router';
import vueRouter from "vue-router";
import axios from "axios";
```

3 与很多第三方模块不同的是，axios 不能使用 use 方法，转而应该进行如下操作

```
import Vue from 'vue';
import App from './App';
// import router from './router';
import vueRouter from "vue-router";
import axios from "axios";
import goods from "./components/goods";
import patings from "./components/pat";
import seller from "./components/seller";

// import "./common/css/base.scss";

// 全局注册
Vue.use(vueRouter);
Vue.config.productionTip = false;
Vue.prototype.$axios = axios;
```
